

# Eyesafe Laser Ranging Modul 3000m

Model:LRF0308C

## PRODUCT DESCRIPTION

The LRF0308C eyesafe laser rangefinder module, produced by ERDI TECH, utilizes a self-developed 1535nm Diode Pump Solid State microchip laser. With a NATO target ranging capability of  $2.3m \times 2.3m$  and a range of  $\geq 3000m$ , it packs a punch in a small package, measuring  $\leq 48 \times 30.5 \times 21$  mm and weighing  $\leq 32$ g. This product boasts stable laser distance measurement, self-testing, power-up, and temperature collection and reporting capabilities.

Among its many features are three-target ranging, target indication both before and after measurement, single and continuous ranging modes, baud rate setting, and tracking of the cumulative number of laser launches. Additionally, it supports serial port update programs and offers various installation options and electrical interfaces, excluding the shell. To further facilitate its integration into handheld portable equipment or multifunctional systems, the module comes equipped with upper computer test software and communication protocols.

The versatility and compactness of the LRF0308C make it an ideal choice for a wide range of applications, including laser distance measurement, unmanned airborne systems (UAS), optical pods, and boundary monitoring.

## TECHNICAL SPECIFICATIONS

| Project  |                                      | Performance Indicators |
|--|--------------------------------------|------------------------|
| Model  |                                      | LRF0308C               |
| Laser Wavelength   |                                      | $1535 \pm 5$ nm        |
| Eye Safety   |                                      | Class I(IEC 60825-1)   |
| Divergence Angle   |                                      | $\sim 0.6$ mrad        |
| Launch Lens Diameter   |                                      | $\Phi 8$ mm            |
| Receiver Lens Diameter   |                                      | $\Phi 16$ mm           |
| Measuring Range<br>(Reflectance 30%;<br>visibility $\geq 8$ km.) | Big Target ( $4m \times 6m$ )        | $\geq 4600$ m          |
|  | NATO objective( $2.3m \times 2.3m$ ) | $\geq 3200$ m          |
|  | People( $0.5m \times 1.7m$ )         | $\geq 2100$ m          |
|  | Drones( $0.2m \times 0.3m$ )         | $\geq 1100$ m          |
| Minimum Range  |                                      | 15 m                   |
| Ranging Frequency  |                                      | 1~10 Hz                |
| Ranging Accuracy   |                                      | $\pm 2$ m              |
| Range Resolution   |                                      | $\leq 20$ m            |
| Precision Rate   |                                      | $\geq 98\%$            |
| False Alarm Rate   |                                      | $\leq 1\%$             |
| Number of multi-target detections                                |                                      | Up to 3 targets        |
| Electrical Interface   |                                      | A1257WR-S-6P           |
| Supply Voltage   |                                      | DC 4.5 ~ 16 V          |

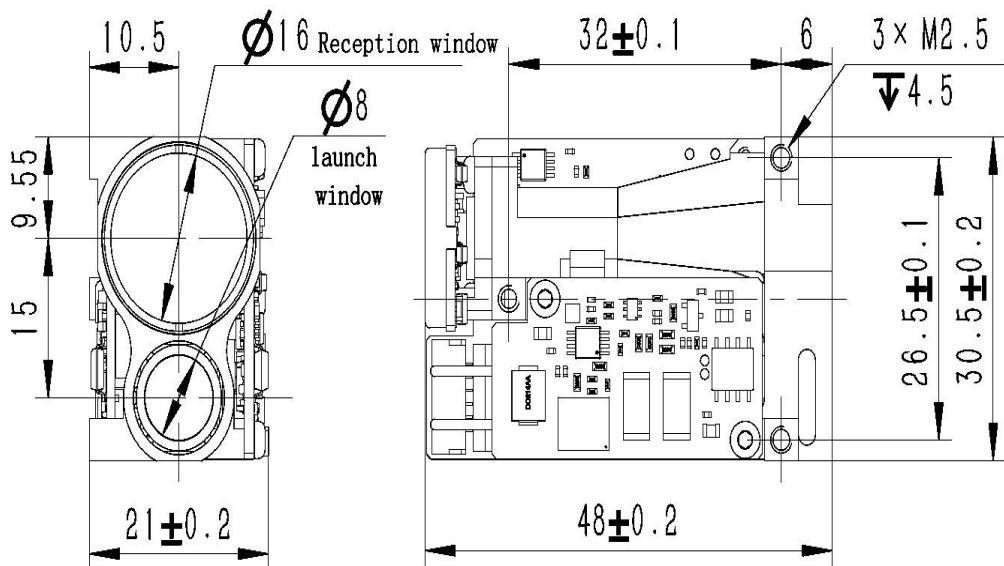

|   |  |
|---|--|
| Standby power consumption                                 | $\leq 1$ mW  |
| Average power consumption                                 | $\leq 2.5$ W @10 Hz  |
| Peak Power Consumption                                    | $\leq 7$ W @12 V   |
| Weight  | $\leq 32 \pm 1$ g  |
| Dimension (L×W×H)   | 48mm×30.5mm×21 mm  |
| Operating Temperature                                     | -40 ~ +70 °C   |
| Storage Temperature                                       | -55 ~ +75 °C   |
| Impact Resistance   | 1200 g/1 ms (GJB150.16A-2009)  |
| Anti-vibration  | 5~50~5 Hz, 1 Octave range /min, 2.5 g                                |
| Ranging Logic   | First and last target, multi-target ranging, distance selectivity    |
| Activation Time   | $\leq 950$ ms  |
| Data Interface  | UART (TTL_3.3V)  |
| Electrical isolation                                      | Isolation of power ground, communication ground and structure ground |
| Reliability   | MTBF $\geq 1500$ h   |
| Optical axis stability                                    | $\leq 0.05$ mrad   |
| Non-parallelism between optical axis and mounting surface | $\leq 0.5$ mrad  |
| Protection Class  | IP67   |
| ESD Class   | (Lens position)<br>Contact discharge 6kV<br>Air discharge 8kV        |
| Electromagnetic Compatibility (EMC)                       | CE/FCC Certification   |
| Eco-friendly  | RoHS2.0  |

## MECHANICAL DIMENSION( mm)

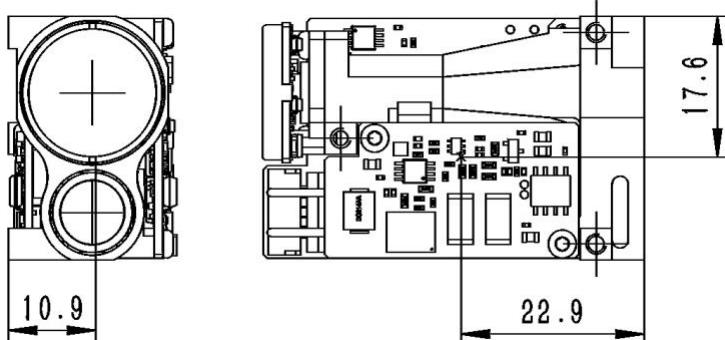

The overall dimension and user installation interface of the ranging module are shown in the figure below.

The centroid position of the ranging module is shown in the figure below.

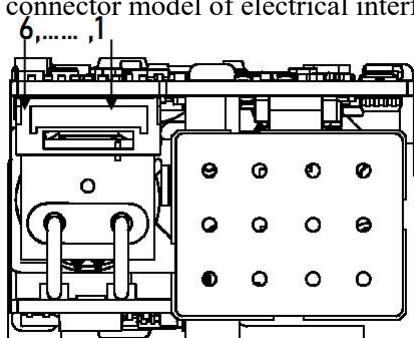

The centroid position of the ranging module is shown in the figure below.

## ERDI ELECTRICAL INTERFACE

User Electrical interface: UART (TTL\_3.3V)

The connector model of electrical interface is A1257WR-S-6P, and the specific wiring definition is shown in the table below.

| Pin | Definition            | Description  | Cable color |
|-----|-----------------------|--|-------------|
| 1   | Positive power supply | Power supply, 4.5 ~ 16V  | Red         |
| 2   | Negative power supply | Power supply, ground   | Black       |
| 3   | POWER_ON              | Module power switch, TTL_3.3V level;<br>Module on (> 2.7V), module off (< 0.3V); | White       |
| 4   | UART_TX               | Serial port sender, TTL_3.3V level   | Yellow      |
| 5   | UART_RX               | Serial port receiver, TTL_3.3V level   | Green       |
| 6   | GND                   | Serial ground  | Black       |

## ERDI COMMUNICATION PROTOCOL

### 1 Protocol description

#### 1.1 Communication rate and format

|                 |   |
|-----------------|---|
| Format standard | Baud rate: 115200bps (ex factory) / 57600bps / 9600bps<br>Byte data format: 1 start bit, 8 data bits, 1 stop bit, no verification |
|-----------------|---|

#### 1.2 Basic packet format

| Section description | Section length(number of bytes) | Value range | Remarks |
|---------------------|---------------------------------|-------------|---------|
|                     |                                 |             |         |

|                    |     |              |   |
|--------------------|-----|--------------|---|
| Frame header       | 2   | 0xEE<br>0x16 | Fixed value   |
| Data length        | 1   | 2~9          | The data length is the total number of bytes in the three parts: device code, command code and command parameters                     |
| Equipment code     | 1   | 0x03         | Fixed value, LRF S Series ranging module  |
| Command code       | 1   | 0~255        | Indicates the control object of the current control command   |
| Command parameters | 0~4 | 0~255        | Indicates the control object parameters of the current control command  |
| Checksum           | 1   | 0~255        | Checksum is the sum of all byte data in the three parts of equipment code, command code and command parameters, with the lower 8 bits |

### 1.3 control command (system → ranging module)

| Command code | explain  | Command parameter bytes |
|--------------|--|-------------------------|
| 0x01         | Equipment self inspection                        | 0                       |
| 0x02         | Single ranging                                   | 0                       |
| 0x03         | Set first / last / multiple targets              | 1                       |
| 0x04         | Continuous ranging                               | 0                       |
| 0x05         | Stop ranging                                     | 0                       |
| 0xA0         | Set baud rate of laser ranging module            | 4                       |
| 0xA1         | Set continuous ranging frequency                 | 2                       |
| 0xA2         | Set minimum gating distance                      | 2                       |
| 0xA3         | Query minimum gating distance                    | 0                       |
| 0xA4         | Maximum gating distance                          | 2                       |
| 0xA5         | Query the maximum gating distance                | 0                       |
| 0xA6         | Query FPGA software version number               | 0                       |
| 0xA7         | Query MCU software version number                | 0                       |
| 0xA8         | Query hardware version number                    | 0                       |
| 0xA9         | Query Sn number                                  | 0                       |
| 0x90         | Total times of light output                      | 0                       |
| 0x91         | Query the power on and light out times this time | 0                       |

### 1.4 Response data (ranging module → system)

| Command code | explain  | Command parameter bytes |
|--------------|--|-------------------------|
| 0x01         | Equipment self inspection  | 4                       |
| 0x02         | Single ranging   | 7                       |
| 0x03         | Set first / last / multiple targets  | 0                       |
| 0x04         | Continuous ranging   | 4                       |
| 0x05         | Stop ranging   | 0                       |
| 0x06         | Ranging abnormality (only when the state in the ranging abnormality command is abnormal, the command is returned after the response command of single ranging or continuous ranging is returned) | 4                       |
| 0xA0         | Set baud rate of laser ranging module  | 4                       |
| 0xA1         | Set continuous ranging frequency   | 2                       |
| 0xA2         | Set minimum gating distance  | 2                       |
| 0xA3         | Query minimum gating distance  | 2                       |

|      |  |   |
|------|--|---|
| 0xA4 | Maximum gating distance                          | 2 |
| 0xA5 | Query the maximum gating distance                | 2 |
| 0xA6 | Query FPGA software version number               | 4 |
| 0xA7 | Query MCU software version number                | 4 |
| 0xA8 | Query hardware version number                    | 4 |
| 0xA9 | Query Sn number                                  | 3 |
| 0x90 | Total times of light output                      | 3 |
| 0x91 | Query the power on and light out times this time | 3 |

## 1.5 Operation process

After the ranging module is powered on, it is in the standby mode by default. It needs to enable the module power switch (power\_on is pulled up) for about 0.5 s (the driving capacitor completes charging), and then all the command operations in 6.2 below can be carried out.

## 2 Specific agreement

### 2.1 Equipment self inspection

2.1.1 Send to laser ranging module:

| Byte     | 0    | 1    | 2    | 3    | 4    | 5    |

## 2.2 Single ranging

2.2.1 Send to laser ranging module:

| Byte     | 0    | 1    | 2    | 3    | 4    | 5    |
|----------|------|------|------|------|------|------|
| Describe | 0xEE | 0x16 | 0x02 | 0x03 | 0x02 | 0x05 |

2.2.2 Laser ranging module return:

| Byte     | 0    | 1    | 2    | 3    | 4    | 5      | 6                                 | 7                                  | 8                            | 9         |
|----------|------|------|------|------|------|--------|-----------------------------------|------------------------------------|------------------------------|-----------|
| Describe | 0xEE | 0x16 | 0x06 | 0x03 | 0x02 | Status | Ranging value integer high 8 bits | Ranging value integer lower 8 bits | Ranging value decimal places | Check_sum |

When ranging the first / last target:

Status: 0x00 indicates that the ranging result is a single target;

0x01 indicates that there is a front target in the ranging result;

0x02 indicates that there is a rear target in the ranging result;

0x03 reserved;

0x04 indicates that the ranging result is out of range;

0x05 reserved;

In case of multi-target ranging:

Status\_bit3~0:

0x0 indicates that the ranging result is a single target;

0x1 indicates that there is a front target in the ranging result;

0x2 indicates that there is a rear target in the ranging result;

0x3 indicates that the ranging result has front target and rear target;

0x4 indicates that the ranging result is out of range;

0x5 reserved;

Status\_bit7~4:

0x0 ~ 0xf indicates the current distance result number; Value range [0, N-1], number of targets  $1 \leq N \leq 16$ ;

Range value = range value integer high 8 bits  $\times 256$  + range value integer low 8 bits + range value decimal bits  $\times 0.1$ , unit m

## 2.3 Set first / last / multiple targets

2.3.1 Send to laser ranging module:

| Byte  | 0    | 1    | 2                 | 3    | 4    | 5      | 6         |
|---|------|------|-------------------|------|------|--------|-----------|
| Describe  | 0xEE | 0x16 | 0x03(data length) | 0x03 | 0x03 | Target | Check_sum |
| Target: 0x01 Set the first target ranging;<br>0x02 set terminal target ranging;<br>0x03 set multi-target ranging; |      |      |                   |      |      |        |           |

2.3.2 Laser ranging module return:

| Byte     | 0    | 1    | 2    | 3    | 4    | 5    |
|----------|------|------|------|------|------|------|
| Describe | 0xEE | 0x16 | 0x02 | 0x03 | 0x03 | 0x06 |

## 2.4 Continuous ranging

2.4.1 Send to laser ranging module:

| Byte     | 0    | 1    | 2    | 3    | 4    | 5    |
|----------|------|------|------|------|------|------|
| Describe | 0xEE | 0x16 | 0x02 | 0x03 | 0x04 | 0x07 |

2.4.2 Laser ranging module return:

| Byte     | 0        | 1    | 2    | 3    | 4    | 5           | 6                                       | 7  | 8                               | 9             |
|----------|----------|------|------|------|------|-------------|---|--|---------------------------------|---------------|
| Describe | 0x<br>EE | 0x16 | 0x06 | 0x03 | 0x04 | Status<br>s | Ranging value<br>integer high 8<br>bits | Ranging value<br>integer lower 8<br>bits | Ranging value<br>decimal places | Check_su<br>m |

When ranging the first and last targets:

Status: 0x00 indicates that the ranging result is a single target;

0x01 indicates that there is a front target in the ranging result;

0x02 indicates that there is a rear target in the ranging result;

0x03 reserved;

0x04 indicates that the ranging result is out of range;

0x05 reserved;

In case of multi-target ranging:

Status\_bit3~0:

0x0 indicates that the ranging result is a single target;

0x1 indicates that there is a front target in the ranging result;

0x2 indicates that there is a rear target in the ranging result;

0x3 indicates that the ranging result has front target and rear target;

0x4 indicates that the ranging result is out of range;

0x5 reserved;

Status\_bit7~4:

0x0 ~ 0xf indicates the current distance result number; Value range [0, N-1], number of targets  $1 \leq N \leq 16$ ;

## 2.5 Stop ranging

2.5.1 Send to laser ranging module:

| Byte     | 0    | 1    | 2    | 3    | 4    | 5    |
|----------|------|------|------|------|------|------|
| Describe | 0xEE | 0x16 | 0x02 | 0x03 | 0x05 | 0x08 |

2.5.2 Laser ranging module return:

Monyear: bit7 ~ bit4 months (1 ~ 12)  
 Bit3 ~ bit0 years (0 ~ 15), corresponding to 2020 ~ 2035  
 Num\_H: The number is 8 digits high  
 Num\_50: Lower 8 digits of No  
 Num: 1 ~ 999 No

## 2.17 Total times of light output

2.17.1 Send to laser ranging module:

| Byte     | 0    | 1    | 2    | 3    | 4    | 5    |
|----------|------|------|------|------|------|------|
| describe | 0xEE | 0x16 | 0x02 | 0x03 | 0x90 | 0x93 |

2.17.2 Laser ranging module return:

| Byte     | 0    | 1    | 2    | 3    | 4    | 5     | 6     | 7     | 8         |
|----------|------|------|------|------|------|-------|-------|-------|-----------|
| describe | 0xEE | 0x16 | 0x05 | 0x03 | 0x90 | PNUM3 | PNUM2 | PNUM1 | Check_sum |

PNUM3: total light output times, bit23 ~ bit16  
 PNUM2: total light output times, bit15 ~ bit8  
 PNUM1: total light output times, bit7 ~ bit0

## 2.18 Query the power on and light out times this time

2.18.1 Send to laser ranging module:

| Byte     | 0    | 1    | 2    | 3    | 4    | 5    |
|----------|------|------|------|------|------|------|
| describe | 0xEE | 0x16 | 0x02 | 0x03 | 0x91 | 0x94 |

2.18.2 Laser ranging module return:

| Byte     | 0    | 1    | 2    | 3    | 4    | 5     | 6     | 7     | 8         |
|----------|------|------|------|------|------|-------|-------|-------|-----------|
| describe | 0xEE | 0x16 | 0x05 | 0x03 | 0x91 | PNUM3 | PNUM2 | PNUM1 | Check_sum |

PNUM3: total light output times, bit23 ~ bit16  
 PNUM2: total light output times, bit15 ~ bit8  
 PNUM1: total light output times, bit7 ~ bit0

## 3 Instruction example

### 3.1 Equipment self inspection

SEND: ee 16 02 03 01 04

RECV: ee 16 06 03 01 ff 00 f7 ff f9

### 3.2 Single ranging

SEND: ee 16 02 03 02 05

RECV: ee 16 06 03 02 04 00 00 00 09

### 3.3 Continuous ranging

SEND: ee 16 02 03 04 07

RECV: ee 16 06 03 04 04 00 00 00 0b

RECV: ee 16 06 03 04 04 00 00 00 0b

RECV: .....

### 3.4 Stop ranging

SEND: ee 16 02 03 05 08

RECV: ee 16 02 03 05 08

### **3.5 Set first target**

SEND: ee 16 03 03 03 01 07

RECV: ee 16 02 03 03 06

### **3.6 Set end goal**

SEND: ee 16 03 03 03 02 08

RECV: ee 16 02 03 03 06

### **3.7 Set multiple targets**

SEND: ee 16 03 03 03 03 09

RECV: ee 16 02 03 03 06

### **3.8 Set continuous ranging frequency 1Hz**

SEND: ee 16 04 03 a1 01 00 a5

RECV: ee 16 02 03 a1 a4

### **3.9 Set continuous ranging frequency 5Hz**

SEND: ee 16 04 03 a1 05 00 a9

RECV: ee 16 02 03 a1 a4
